

Séminaire Groupes Réductifs et Formes Automorphes

Le 7 mai 2018 à 10h30 (Jussieu)

On the Langlands-Shahidi method for Loop Groups.

Exposé de Manish Patnaik
(Alberta)

Résumé :

We begin by reviewing some of the main differences between automorphic forms on infinite dimensional loop groups (or affine Kac-Moody groups) and the usual finite-dimensional theory. After this, we will explain (mostly in the function field setting) a generalization of the Langlands-Shahidi method that aims to analyze L-functions of finite-dimensional groups via Eisenstein series on infinite-dimensional ones.
